Qart.ai: RunPod proof of use

Team Qart.ai (SDC Hackathon 2026, Domain 1). A RunPod Serverless endpoint (queue-based, scales to zero, max 1 worker) serves two open models for the app: BAAI/bge-m3 embeddings and BAAI/bge-reranker-v2-m3. The worker image is built from the team's GitHub repository (branch main). Screenshots taken on 25 October 2026 from the team's RunPod account.

1. The Qart.ai serverless endpoint: Ready, built from GitHub Moo7x/Qart.ai (main), GPU pools 24 GB and 16 GB

2. Builds from the GitHub repository, and the account's credit balance

3. The endpoint in the Serverless overview, with its idle worker
