AI is changing your work.
What do you learn next?

Qart.ai turns public evidence into a role you can reach and a free route to get there.

Nur doesn't need more courses. She needs a decision.

N

Nur Aisyah

Cash application analyst · KL

SYNTHETIC PERSONA

"Applied incoming customer receipts to open invoices in SAP for four entities."

Six years in a shared services centre. Her CV, in her words.

WHAT A COURSE LIST GIVES HER

- Prepare and visualize data with Power BI
- Introduction to Transact-SQL
- Explore and analyze data with Python
- Get started with Power Automate
- Introduction to generative AI
- Process credit and collections in Dynamics 365
- Explore core data concepts

WHAT SHE HAS TO DECIDE

01

Which of my skills still count?

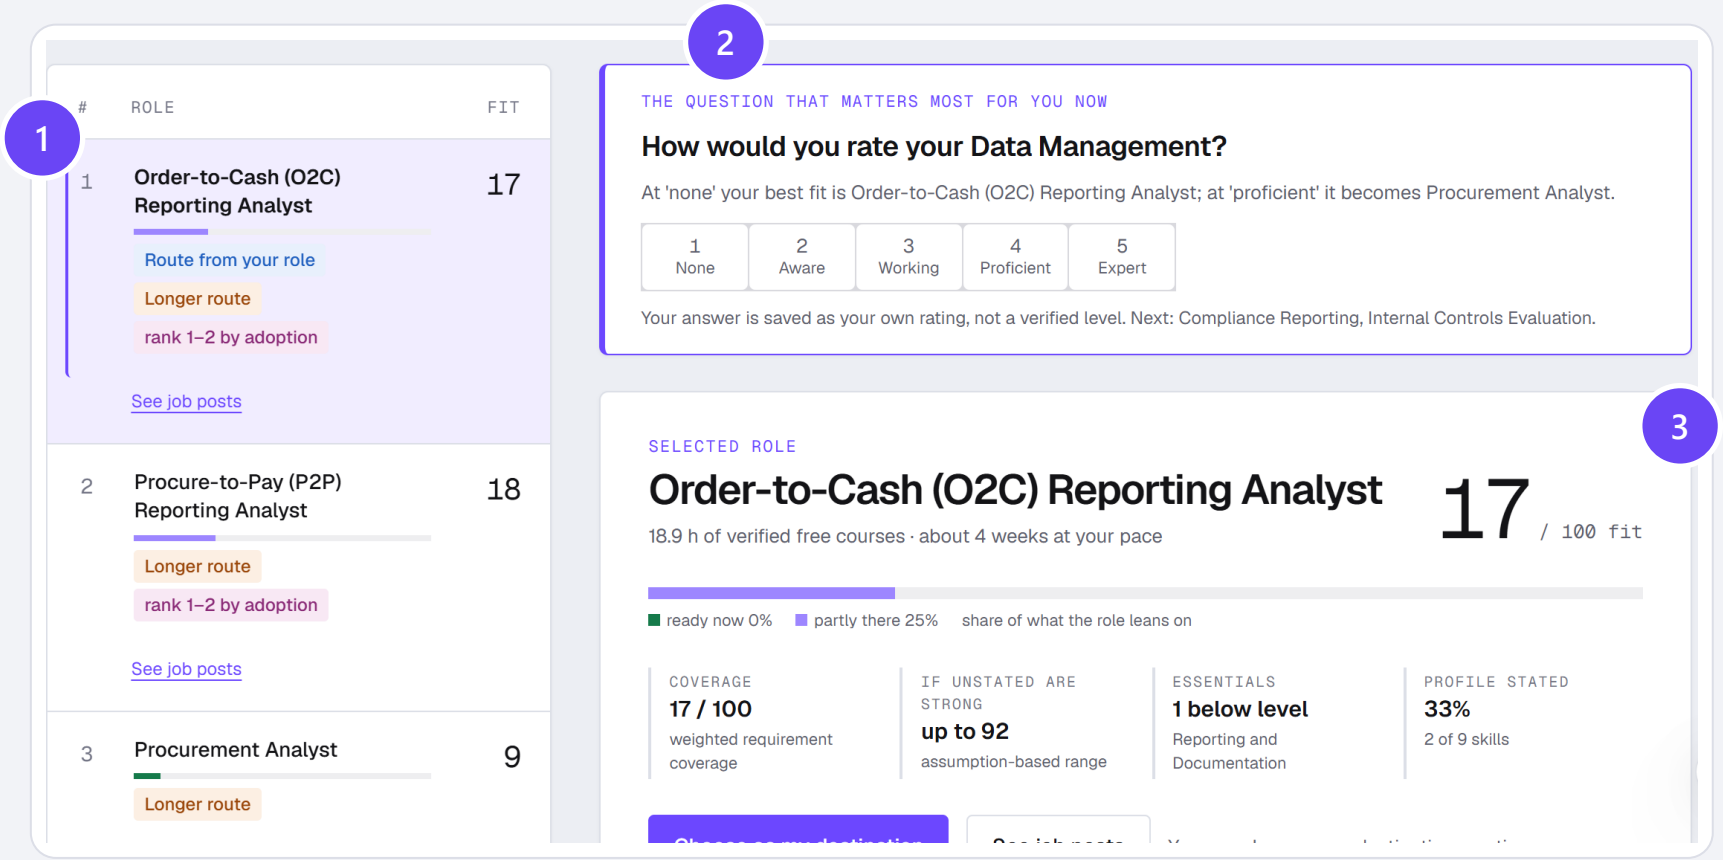

02

Which role can I actually reach?

03

What do I learn first, and for how long?

Qart ranks the roles she can reach, and shows why.

LIVE APP · qartai.replit.app · SYNTHETIC SAMPLE “NUR”

1 **Every destination scored**

Nine real GBS finance roles, ranked for her.

2 **Her most useful question**

The one rating that would change her result the most.

3 **Fit you can check**

Fit = how much of the role's requirements she covers today, point by point.

Dated evidence moves the weights.

Example from the live app: Nur and the Order-to-Cash Reporting Analyst role.

OBSERVED

Anthropic Economic Index

89%

of AI use on a linked Data Management task is automation-style

`2026-05 data`

→

ASSUMPTION

Scenario

50% · 100%

of that use reaches the task, under moderate or fast adoption

`declared rule`

→

COMPUTED

Skill weight

×1.44 · ×1.89

Data Management counts more. Her routine skill counts less: ×0.67 · ×0.34

`code, not the model`

→

RESULT

Her fit and route

recomputed

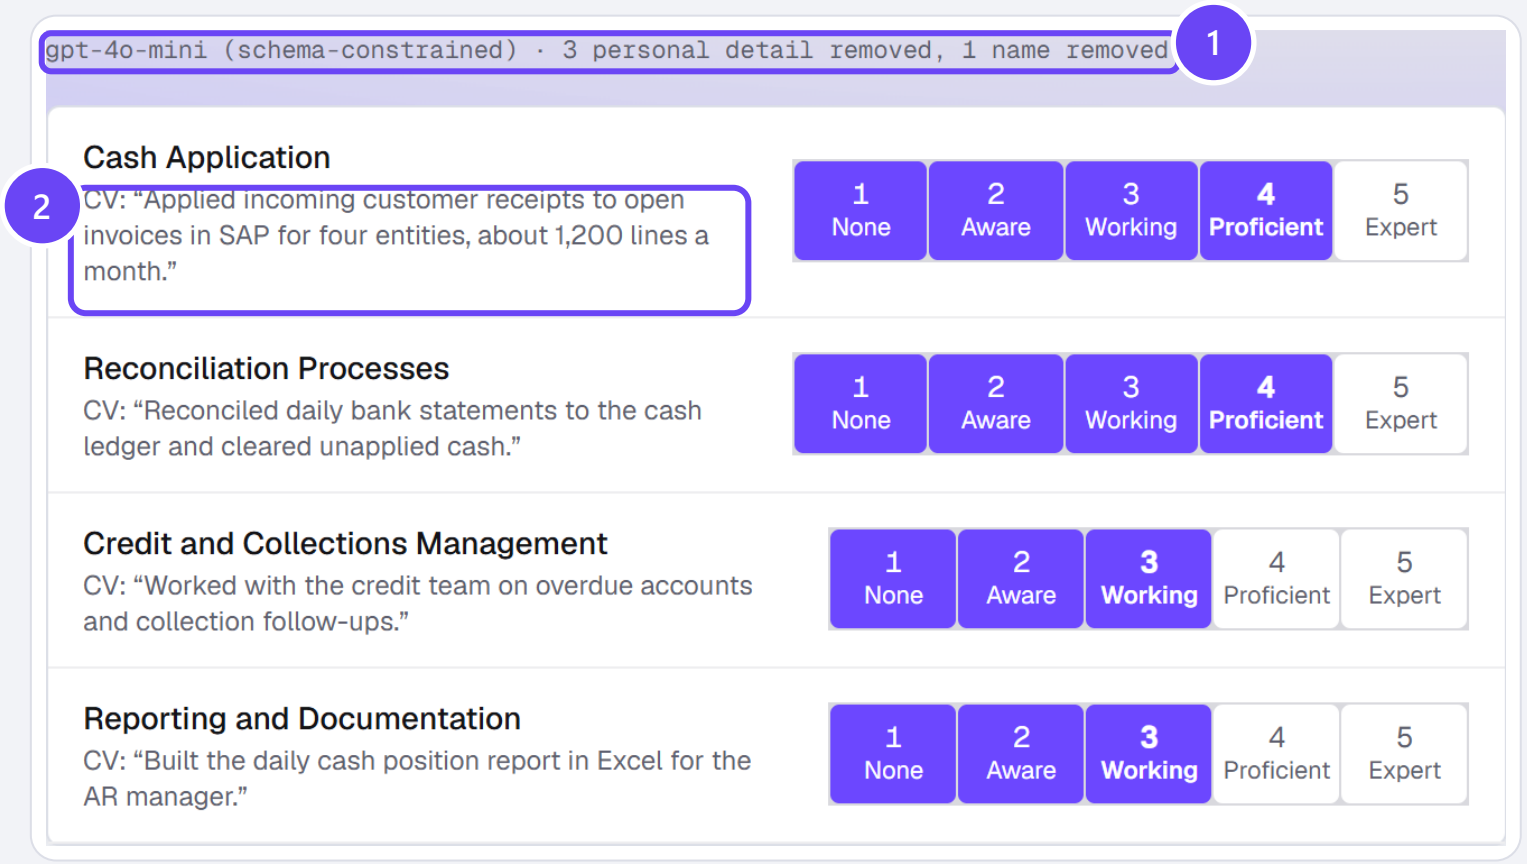

Essential skills keep their level in every scenario

`labelled estimate`

Collected every day by a **Replit Scheduled deployment**. New evidence arrives as a change Nur can accept or decline.

The model reads her CV. Code decides.

1. **Personal details out first**

   Names, IC numbers, phone and email are removed before any AI sees the CV.

2. **Every skill quotes the CV**

   gpt-4o-mini must quote her CV. Code throws out any quote that isn't really there.

3. **Numbers come from code**

   Levels stay her own claim. Every score is computed from stored, dated data.

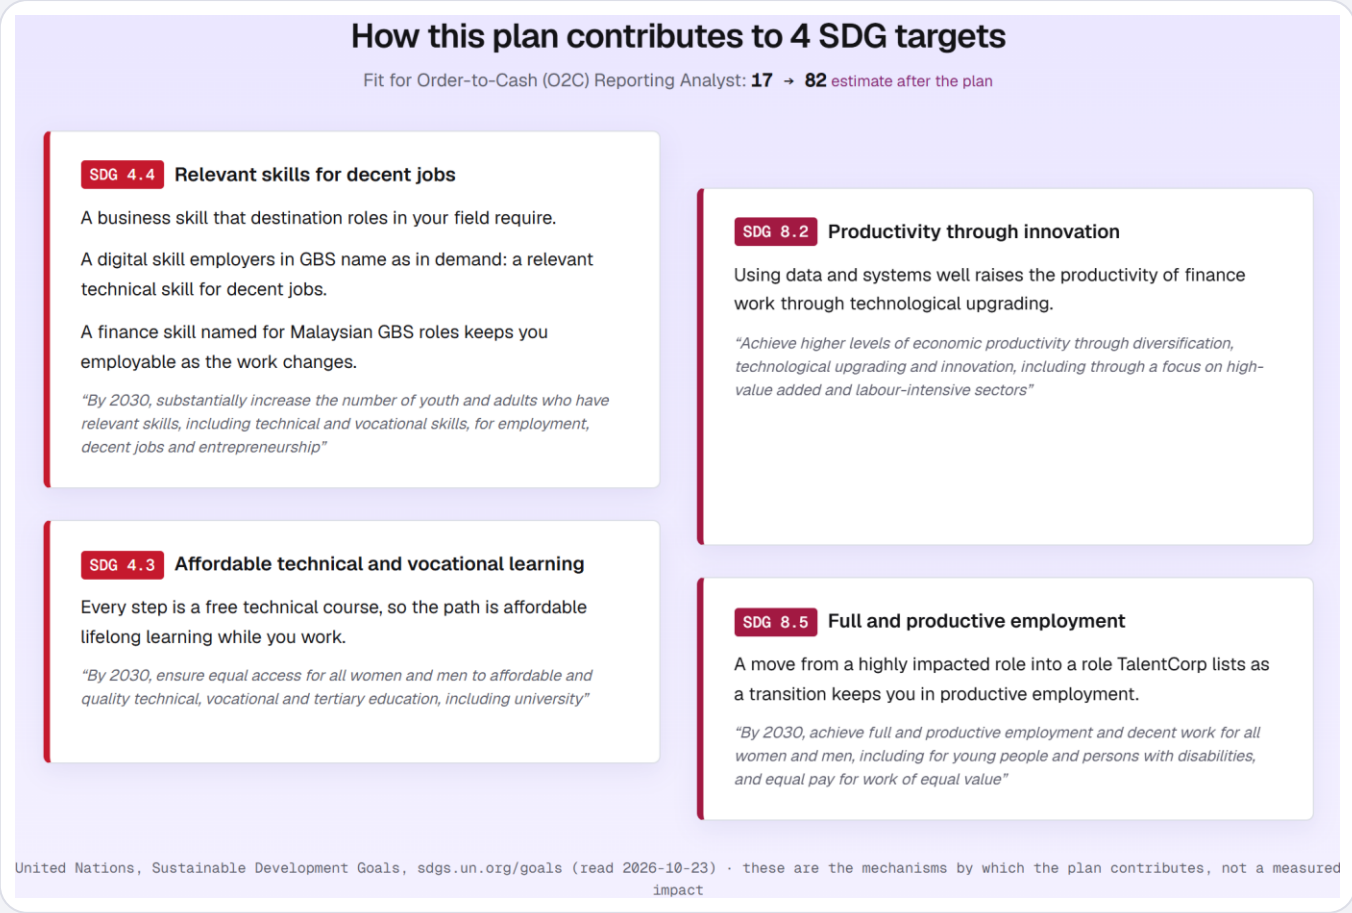

Built for Malaysia: English and Malay.

MEASURED · 40 LABELLED JOB TITLES · TOP-1 MATCH

Two open models on a **RunPod serverless GPU** match any job title to 1,016 occupations. If the GPU is cold, a labelled keyword fallback answers.

Her route serves four SDG targets.

MEASURED TODAY

73% of the skills our roles need have a verified free course

100% of numbers on screen show their source and date

PHASE 2 TARGETS · 10+ REAL USERS

80% reach a plan in under five minutes

70% can explain why their top role was chosen

Course coverage target: 73% → 90%

Nur can now choose her next role, and start step one this week.

WORKS TODAY

GBS finance & accounting: 9 roles

7 public sources, updated daily

English and Malay matching

Free roadmap with checked resources

NOT YET

Fields beyond GBS finance

Testing with real users

Scenario weights are our assumptions
