Qart.ai

AIVERSECITY · SDC HACKATHON 2026

From who I am today *to where I can be in the AI era.*

Ranked future roles, a skills gap and a free learning route for Malaysia's GBS finance workers, built on public evidence you can check.

Today's skills → Skills gap → **A future role**

QART.AI · KYDYRGALIYEV MEIIRMAN · MOUNIR BEN HASSINE · XIAMEN UNIVERSITY MALAYSIA

01 — THE PERSON

Meet Nur.

What should she learn next?

Cash application analyst in a shared services centre in Kuala Lumpur. For six years she has matched customer payments to invoices for four countries.

She wants to move into reporting and data work. **Which of her skills still count?** Nobody can tell her.

N

Nur Aisyah

Cash Application Analyst · KL

FROM HER CV

Experience	6 years
Work	cash application, SAP
Scope	customers in 4 countries
Goal	reporting and data

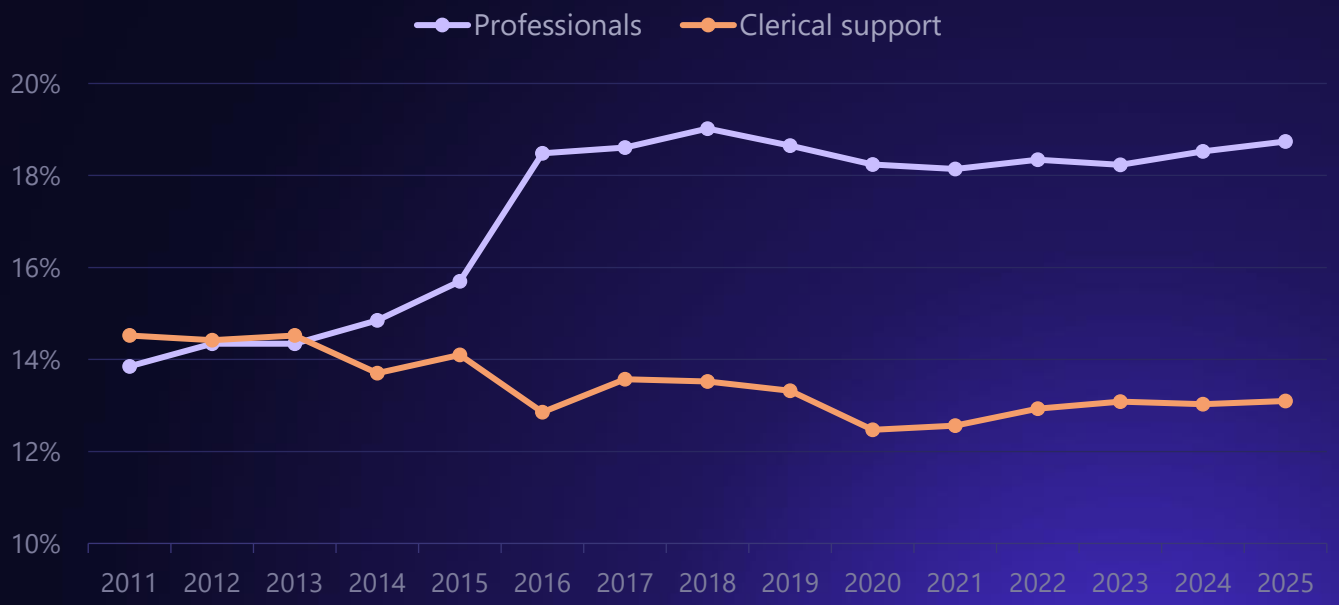

32%

of Malaysia's GBS workforce, about 89,000 people, are in roles highly impacted by AI

Source: TalentCorp (2024), Impact Study of AI, Digital and Green Economy: GBS, p. 48

THE PROBLEM

The signals exist.
But they are scattered.

Share of Malaysian employees by occupation group · OpenDOSM, 2011–2025

14.5% → 13.1%

Clerical work's share of Malaysian employees, 2011 to 2025, while professionals rose 13.9% → 18.7%.

DOSM via OpenDOSM

Already in use

AI is used on the tasks GBS clerks do, and the ILO rates clerical work among the most exposed.

Anthropic Economic Index · ILO WP140

56% · 26%

of Malaysian professionals use AI at work · have had formal training.

Hays Asia Salary Guide 2025

Who we serve, and *when*

Malaysian GBS finance and accounting: about 250,000 people today, 276,000 by 2029 (TalentCorp). The question is personal, and nothing answers it.

THE WORKER · PRIMARY

Finance staff in highly impacted roles

Who	Cash application, AP, AR and reconciliation staff in shared services centres
Moment of need	A restructuring or automation notice
What they need	Which skills still count, which roles are within reach, what to learn first

THE ENTRANT · SECONDARY

Graduates and career switchers

Who	Accounting and finance students, TVET and university career centres, switchers
Moment of need	The first job search or internship window
What they need	Which entry roles still grow, and how to show readiness

Qart.ai turns public evidence *into a plan Nur can follow.*

01

Evidence with a date

Every claim comes from dated public data: DOSM, TalentCorp, the Anthropic Economic Index, O*NET, ILO and MyCOL.

02

Code makes every number

The language model reads the CV and explains in plain words. It never invents a score, a job or a course.

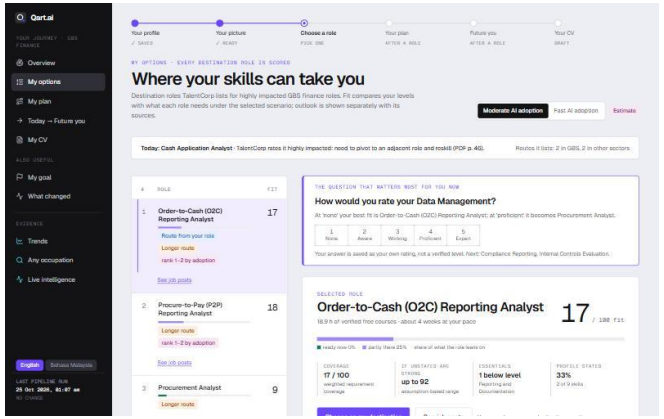

03

Nur decides

Qart recommends roles and a route. New evidence proposes changes; she accepts or declines them.

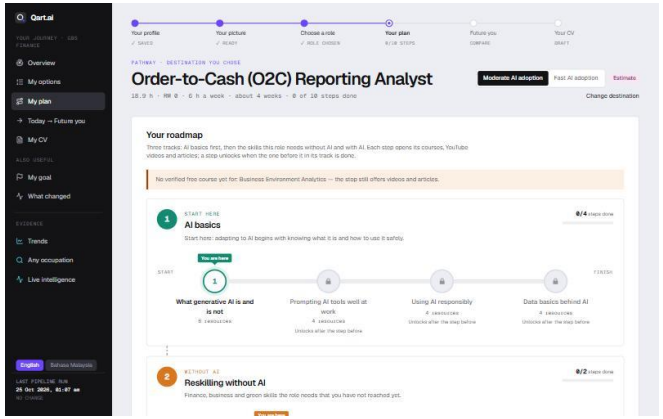

LIVE DEMO · WHAT NUR SEES

What Nur *gets*

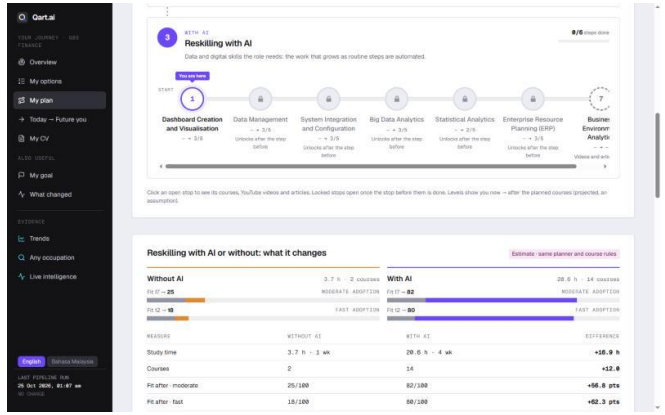

Ranked roles

Nine GBS roles, a fit score with every point shown, the gap, two scenarios.

A roadmap

AI basics first, then two roads. Each stop opens checked free resources.

With or without AI

Same planner, same rules: hours and fit for each route, in both scenarios.

Screenshots from the live app (qartai.replit.app) with the synthetic sample "Nur". Fit is an estimate under declared course rules.

How it works *underneath*

AI AT THE EDGES · CALLED BY THE BACKEND, EACH WITH A TIME BUDGET AND A LABELLED FALLBACK

Personal details are removed **before** any AI sees the CV.

OpenAI gpt-4o-mini

Reads the scrubbed CV into skill claims. Every claim must quote the CV; code checks each quote. Explains results in plain words, never numbers.

RunPod serverless GPU

BGE-M3 embeddings + BGE reranker match any job title, English or Malay, to 1,016 occupations, and tasks to skills. Keyword fallback if the GPU is cold.

HARDEST RISKS · AND WHAT WE DID

We named the risks early, *and built the answer into the code.*

AI inventing jobs, courses or numbers	Every skill must quote the CV; every course, video and article was checked by hand; the model may not write numbers.	**0 numbers from the model**
Matching quality	Open GPU models on RunPod, measured on 40 labelled job titles against keyword search.	**Top-1: 58% → 72%** **Malay titles: 0% → 75%**
A cold or missing GPU	Every call has a time budget and a labelled keyword fallback, so no page waits.	**Labelled fallback, always**
Bias	CVs that differ only in name, gender, religion, race or age must get identical results.	**Paired-profile test passes**

Impact we will *measure*

MAIN SDG TARGET

4.4

Relevant skills for decent jobs

Youth and adults with the skills employers need, including technical and vocational skills.

8.5	4.3	8.2
decent work	lifelong learning	productivity

PHASE 2 TARGET	TODAY	TARGET
Verified free-course coverage of the skills the roles require	73%	90%
Test users who reach a plan in < 5 min of 10 or more test users	—	80%
Test users who can explain their top role in their own words	—	70%
Numbers shown with source and date checked by automated tests	100%	100%

Today = measured in the prototype on 24 Oct 2026; user testing starts in Phase 2.

Qart.ai

Qart.ai doesn't tell Nur what to become.

It shows her the evidence, the options and the cost.

Then she decides.
